Sales by Category

**Smart Office integration:** Click&DECiDE reports and Dashboards can be directly integrated in your INFOR Smart Office.

**M3 API:** By using the M3 API, Click&DECiDE is able to access to all M3MI programs and transactions such as MDBREADMI, and preserves the integrity and the security of the M3 data. To simplify the life of the end user, we have created some functions such as, automatic conversion of the packed date, time, and timestamp fields.

**iSeries:** Click&DECiDE can access to the iSeries database with our own interface or by using ODBC. Click&DECiDE can also import all query/400.

They trust us:

**OEM Partners**

**More than 1 000 companies are using Click&DECiDE**

**Microsoft Partner**  
Silver Business Intelligence

## Our benefits:

**Ad Hoc queries:** We can work on any kind of data, and export in any format such as: Report, Dashboard, PDF, Excel files or real time, Power pivot, Power BI, Infor Smart Office, QlikView, etc....

**Agile query:** it is really easy to make your own query. You don't even need to use your keyboard or to know the SQL language.

**Reports:** Simple to complex reports can be created with builder.

**Web Portal:** You can access to all your reports, dashboards, and pivots without installing any clients on your devices (computer, pad, or smart phone). Moreover, for Excel, Power BI, QlikView, etc..., the Web Portal is acting like a data hub, by following protocol such as: Web query, oDATA feed, REST, XML, RSS feed, and more. Finally, you can use our Web Portal to access to other applications.

**Dashboard & Pivot:** Direct on your Web Portal, you can create any kind of interactive Dashboard or dynamic Pivot.

**Data consolidation:** Click&DECiDE allows you to join information of different sources. Per example you can make a single query, joining the production information coming from your iSeries, with your budget in Excel. And the result can be presented in a SQL server table.

**Agile ETL functionality:** In addition to bufferise the result of your queries, by user or user groups, a query can generate automatically a data transfer from any database to SQL server. Moreover, those queries can be scheduled every night, hours... then the end users will only work on the SQL server. These features will prevent the end user to damage the database and overload the production server.

**Scheduling task & keyword:** Keywords such as: last month, yesterday, etc. simplify the scheduling of your monthly, daily...reports. And the result can be displayed through a calendar interface.

**Alerts:** Too much information kills the information. To avoid none relevant information, you can create alerts that will generate your reports only if your thresholds are achieves, and send the result by mail, or RSS feed.

**Customization:** You can create your own web portal skin, and report templates according to your graphic chart.

**Security:** The security, rights and parameters can be managed by user groups, or users, which can come from Active Directory or Click&DECiDE administration manager.

**Report Demo Multi Criteria with 3 Break Levels**

Area	Code	Salesman name	Date	Amount
ATLANTIC	4	Diane Meyer	2014	\$21,881.15
ATLANTIC	12	Karen Walker	2014	\$2,792,881.15

**Amount vs Salesman name by Date Year**

Area	Code	SQL	Date	Date Month
ATLANTIC	4	Diane Meyer	2014	\$21,881.15
ATLANTIC	12	Karen Walker	2014	\$2,792,881.15
